

Danis Davletiarov

A **backend developer** with a primary focus on **PHP and Go**.

Currently based in Belgrade, Serbia.

I possess more than eight years of experience in backend development and remain receptive to novel and engaging propositions in this field, particularly about financial technologies.

Remote or hybrid work is in priority. Relocation and full-time office work are also discussable.

Please note that I do not entertain employment offers from government-controlled or related companies except for science and cultural projects.

Languages:

English B2 **Tatar** B1 **Serbian** A2 **Russian** C2

Work experience

Apicworld LTD

PHP Backend Developer

Sep 2023 — present

Development of a fault-tolerant payment gateway, including the design of internal solutions and the implementation of integrations with payment systems worldwide.

Stack: PHP 8, Symfony, Postgres, ClickHouse, Temporal

Direct Credit LLC

PHP Backend Developer

Dec 2019 — Aug 2023

Highload financial technology (credit broker) project.

Responsibilities: development, refactoring, and revising of bank integrations, internal and external APIs, generators of documents and reports; splitting a monolithic application into microservices, and creating new internal services.

Stack: PHP 5.6–8.1, Symfony, MySQL/MariaDB (+handlersocket), Postgres, Memcached, RabbitMQ, ELK, PHPUnit, Docker, compose

Reqloud

Full Stack Developer

Oct 2016 — Nov 2019

Backend and full stack development in a small union of freelancing friends.

The most interesting projects that we created were made for an AAA+ rated stock broker, a national cultural institution, and the largest Minecraft server in CIS (extracted as a separate project)

Very large stack, mostly based on PHP (up to 7.3 w/ Symfony up to 4), MySQL/MariaDB (less often Postgres, SQLite) Pug and Twig, scss/sass, jQuery, Bootstrap.

Cristalix

Full Stack Developer

Dec 2017 — Nov 2018

The largest Minecraft server in Russia and CIS.

Development of all project websites with accounting and payment services integrations (PHP 7.2, MariaDB)

Forum updates with plugins development (XenForo, Zend)

Servers administrating (Debian, CentOS)

Development and support of core service implementing connections between servers and data storing (Node, MongoDB, Redis)

System and users activity monitoring (InfluxDB, Grafana)

Sometimes development team management

LightSoft

PHP/Full Stack Web Developer

Mar 2016 — Jun 2016

Worked in a backend team developing a highload web service (hotels reviews and booking) using PHP (5.4-5.6) and a selfmade framework.
